

Shipping Cradles

Our truck shipping cradles or storage saddles reduce damage by vibration and last longer than wood. Made from recycled rubber, they are durable, yet softer and gentler on your products. Our shipping cradles will conform to the unique dimensions of the product, giving additional support. They stay in place better than wood cradles, dramatically reducing the risk of accidents. They do not break, so your products are safe with less cradle replacement costs. Another savings with Millennium Molding shipping cradles comes from fewer damage claims on delivery. The dense recycled rubber absorbs road shock more effectively than wood!
